

Maids.cc Project

Project description:

A simple book store management system so the owners can track the borrowing of books from patrons, the project is implemented using Spring boot (Java) and h2 sql database.

Entities:

Book (ID, AuthorName, ISBN, PublicationYear)

Patron(ID, firstName, lastName, email, phoneNO)

borrowing_record(id, patron_id, book_id, borrow_date, return_date)

Relationships:

1- Book -----1-----M-----Borrowing_record
2- Patron-----1-----M-----Borrowing_record

Technologies used:

Spring boot (java)

H2 SQL database

Junit (Testing)

Steps to run the project:
